Preface

This is the preface to the book. It introduces the author's motivation, intended audience, and approach. A preface speaks in the author's own voice and is typically short — two to four pages.

A new paragraph continues the conversation. The preface is where one might explain how the book came to be, what makes this treatment different, and what assumptions are made of the reader.

A book template uses placeholder text like this so the layout can be inspected before any real writing begins. Replace this text with your own preface.

Acknowledgments

Acknowledgments are conventionally placed in the front matter, just after the preface. They thank colleagues, institutions, funding bodies, and family members who supported the work.

A short, sincere acknowledgment is generally preferred over an exhaustive one. Two to four paragraphs is typical.

Chapter 1

INTRODUCTION

This is the opening sentence of the introduction, set with a drop cap and small caps on the first few words. The introduction lays out the structure of the book, motivates the central questions, and previews the arguments that will be developed in the chapters that follow.

In a working manuscript, this chapter would survey the landscape, define key terms, and set expectations for the reader. It might end with a brief outline of the chapters ahead — a roadmap that orients the reader before they encounter the technical material.

Part I

FIRST PART

Chapter 2

CHAPTER TITLE

This is the opening sentence of the chapter, set with a drop cap and small caps on the first few words. The opening paragraph should be long enough to fill the vertical space reserved by the drop cap, otherwise the next section heading will appear too close to it.

A second paragraph continues without extra spacing. Classical book typography uses indented paragraphs and minimal vertical white space — the rhythm of the prose is what carries the reader through.

First Section

A section heading without a number. The book template uses unnumbered sections so that the chapter and part numbers carry the structural hierarchy on their own. Sections still appear in the table of contents, so navigation is preserved.

Citations in this template are rendered as small superscript numbers, placed exactly where they belong in the text[1]. Multiple sources can be grouped within a single citation and are sorted and compressed automatically[1,2].

Mathematics

Mathematics is set inline, $E = mc^2$, or as a numbered display:

$$i\hbar\frac{\partial\psi}{\partial t} = \hat{H}\psi. \tag{2.1}$$

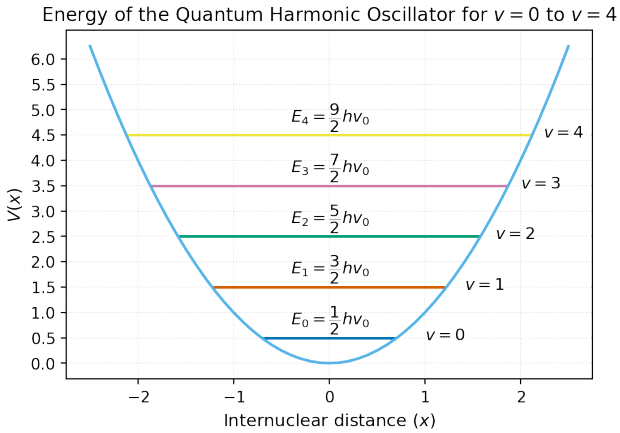

Figure 2.1. An example figure showing energy levels.

Equation (2.1) is the time-dependent Schrödinger equation, written here purely as an example of a labeled display that can be referenced from elsewhere in the chapter.

A second display can follow with a different label:

$$\langle A \rangle_\psi = \langle \psi | \hat{A} | \psi \rangle. \tag{2.2}$$

The spacing around displays is set in `bookstyle.sty` and gives mathematics enough room to breathe without losing contact with the surrounding text.

A Subsection

Subsections nest under sections and are also unnumbered. They are useful when a section grows long enough to need internal structure but not long enough to deserve its own section.

Figures and Tables

A figure is included by placing the file in the `figures/` folder and calling `\includegraphics`:

Refer to figures with figure 2.1. The float placement `[t]` lets the figure rise to the top of a page, which is the typical book convention — figures rarely sit inline in long-form prose.

Table 2.1. Fundamental physical constants.

Quantity	Symbol	Value
Speed of light	c	2.998×10^{8} m/s
Planck's constant	$\hbar$	1.055×10^{-34} Js
Elementary charge	e	1.602×10^{-19} C

A table can summarize key values:

Tables in this template use the `booktabs` convention: horizontal rules only, used sparingly — top, middle, and bottom. Vertical lines are deliberately omitted.

Closing

A closing section can wrap up the chapter and gesture toward the material in the next one. In a longer book, this is where you might preview the next chapter or step back to summarize what was covered.
